Oral Myofunctional Disorders
& Swallowing
Handbook

ORAL MYOFUNCTIONAL DISORDERS	SWALLOWING
Tongue Thrust Swallow Open Bite Thumb, finger, pacifier sucking Associated Speech Sound errors	<ul style="list-style-type: none"> ● Oral phase ● Pharyngeal phase ● Esophageal phase

In 2003, Simone Friedman was approached by an orthodontist in Toronto to help her clients with their tongue thrust swallows prior to getting their braces put on and definitely before being taken off. Simone decided to fly to California to take a 5 day intensive accreditation course specifically in Oral Myofunctional Disorders. She came back to Toronto bringing with her knowledge and programming to fix this very interesting condition. This program has been implemented for 14 years with an astounding success rate.

Simone has since trained all her staff in this program and the results continue. If followed correctly, the program will provide you with the desired results. There is no reason, if you have a tongue thrust swallow that you have to worry. We know exactly how long it will take to correct. After each session, you will receive a homework assignment that has to be practiced three times per day for 5 minutes. If you do this, your tongue thrust swallow will be resolved.

How Are Oral Myofunctional Services Offered at Therapy Spot?

Step One

Assessments at Therapy Spot:

- Interview of the individual, their family, or important communication partners
- Review of case history (pre-injury status, academic, employment status, medical & rehabilitation history, etc.)
- Comprehensive assessment of
 - Oral Myofunctional Disorders
 - Swallowing (If needed)
 - **we do on-site hearing tests for understanding speech and language**
- Consultation with other professionals or review of their reports as indicated

Step 2: Treatment

- You will receive your program each week.
- You will receive the necessary supplies
- Goals will be broken down into achievable steps and each therapeutic session will target one of those sub-steps to allow for continued progress.
- You will be able to see the progress each week

How are Swallowing Services Offered at Therapy Spot?

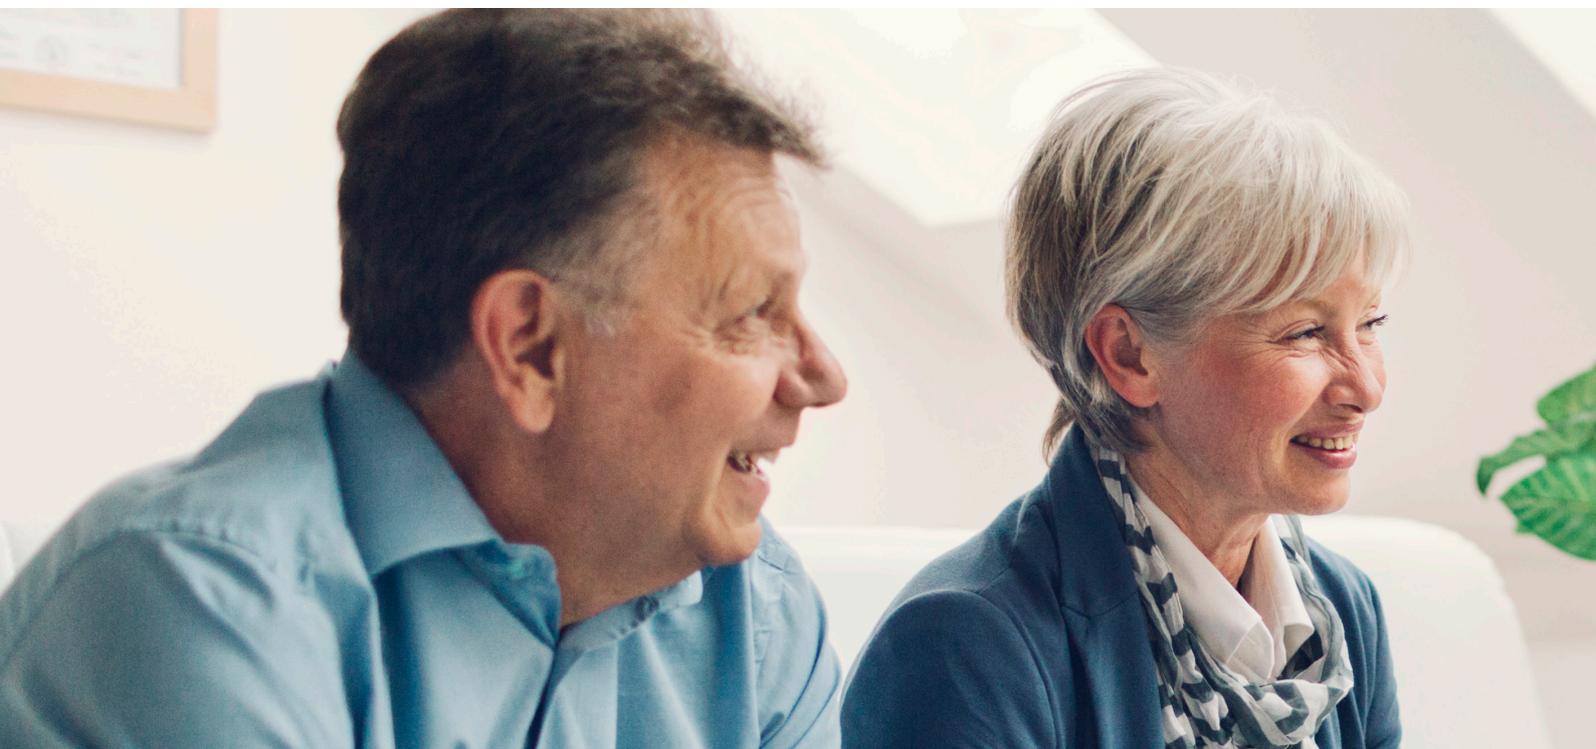

Step One

Before we can begin treatment, we need to complete an assessment to answer the following questions:

- What are your swallowing issues in the context of your daily life?
- What are the cognitive, communication, speech, or language difficulties that may affect your ability to understand any instructions for swallowing (i.e. work, school, family interactions, community involvement)?

Assessments at Therapy Spot:

- Interview of the individual, their family, or important communication partners
- Review of case history (pre-injury status, academic, employment status, medical & rehabilitation history, etc.)

- Comprehensive assessment of
 - Swallowing
 - Consideration of potential contributing factors (fatigue, sleep disturbance, pain, medication, stress, hearing, mental illness, etc.)
 - Dysarthria
 - Apraxia
 - **we do on-site hearing tests for understanding speech and language**
- Selection, administration, and interpretation of standardized tests
- Consultation with other professionals or review of their reports as indicated
- Collaboration with client in the preparation of Goal Attainment Scale meaningful Goals

Step 2: Analysis of Results and Development of Treatment Plan

An individualized 12-week (most often) plan is developed for you. The plan takes into consideration :

- Your assessment results,
- Your current needs,
- Goals you want to achieve
- Task analysis of each goal in order to break it down into sub-steps that can be achieved over a 12 week period.
- Decision on where Treatment will take place:
 - Your home
 - Your work-place
 - Your school
 - Our clinic
